Customer Reviews

This book has been written especially for children who have been convinced by the attitudes of adults that mathematics is impossible and only for bright kids. It shows that maths is nothing more than a way of looking at the world and that it can be relevant to everyday life and fun. --This text refers to an out of print or unavailable edition of this title.

Marilyn Burns is one of today's most highly respected mathematics educators and is the founder of Math Solutions. She received the Louise Hay Award for Contributions to Mathematics Education, and in collaboration with Scholastic, she developed "Do the Math" TM, a program for elementary students. David Weitzman is an author and illustrator of numerous books for children, including Skywalkers, Pharoah's Boat, and A Subway for New York.

Fantastic book for kids who can add, subtract, multiply and divide - and want to have fun with math. I frequently recommend this book to Moms (and Dads) who are struggling with developmental math if they have kids or younger siblings, and say the book is for the kids - but, they need to help the

kids work through the book. That way the adult who is afraid of math can also see that math can be fun!

Bought this for my daughter after her teacher recommended it. She hates math and this was good to open her eyes to how math and how it is in every thing and how fun it can be. It is a picture book with little tidbits of information. Not a chapter book.

A little slice of my childhood :) I remember reading this (and other BPS books) many times when I was a pre-teen, and it was really fun reading this again! Really neat concepts presented in easy to understand formats and applications. Fun illustrations. It doesn't talk down to kids, either.

I ordered this for my 11 year old daughter. Desperate to find something that she would get a laugh at and at the same time learn about math. I've given it to her to check out alone and plan on using it more in the future. It has silly and unique ways of problem solving which essentially that is math. Worth the buy.

I have had my own copy for years and bought this for a friend who has just started as a building based educator and might have to do emergency coverage of math classes. The ideas in this book engage the students' brains in mathematical reasoning while they are having fun solving "street" puzzles.

I have a student in school who has loved reading this book and it has shown her some clever math tricks along the way. I can't recommend this book without recommending all of Marilyn Burns' books - they are entertaining and fun for all readers.

The 3 star is for the book it self. I was expecting motivational story behind the numbers. I still keep it donated to library incase other find it interesting. Service it self e elent. Thank you

I got this when my kid was young, since he had a teacher who made him hate math. This book make math fun and helped take some of the discomfort out of my son. It's a fun book for kids and adults who like math also.
