The Everything Kids' Easy Science Experiments Book: Explore The World Of Science Through Quick And Fun Experiments! (Everything® Kids)

Synopsis

Why is the sky blue? What makes a balloon float? Why can't I see in the dark? You can discover the answers to these questions and more with *The Everything Kids' Easy Science Experiments Book*. Using easy-to-find household materials like soda bottles and flashlights, you can build bubbles, create plastic--even make raisins dance! All of the experiments are kid-tested and educational--but more importantly, they're tons of fun! These quick and easy experiments help you to: Explore your five senses. Discover density and sound. Delve into seasons, life cycles, and weather. Investigate electricity and light. Study the solar system and landforms. Examine matter and acids/bases. This is the perfect book for a rainy Saturday, a lazy vacation day, or even after school. You'll have so much fun conducting the experiments, you'll forget that you're actually learning about science!

Customer Reviews

There are so many great experiments in this book!! Pay attention to the age range of 7-12 years. Some experiments, even for a 7 year old, need parental assistance. We bought this for our nephew. His mom is a school teacher and picky about educational items, but she said this book is a HIT. She

and he love it and have been doing experiments together. If you have a little scientist, this book has a lot of great things to try out.

Great little science book for the young learning mind. My grandson is in the first grade and I thought he might like to know about some things in this world and how they work.

Bought as a gift for a 10 year old boy. His parents told us that him and his sister were excited about doing some of the projects and already had a few picked out... so I'm guessing it's a winner while being educational as well

This is a fun book for over the summer with kids your kids love science this has a lot of fun stuff to do I recommend for ages six and up

My husband and sons have a great time building and exploring with the different experiments. Our 6 year old especially loved building the volcano with a king soda and vinegar. He got a kick out of it making a mess.

Just bought this for my younger brother for his 9th birthday. He loves creating his own experiments and this is a great way for him to see some experiments and fully understand what is happening and why it's happening. Most of these experiments can be done by an older child (5+) by him/herself or with a friend. Very few require advanced set-up or adult help which is great. I intend to purchase this book for my son for his 5th birthday as well so we can do some of these experiments at home! Highly recommend.

This book came a day earlier than expected. I leafed through it, and it looks like experiments my students (or their parents) will enjoy reading about while waiting for their music lessons--or trying out at home. Education at its most fun! Good size, with an inviting glossy cover. Makes me wish I could homeschool all over again!

My grandson LOVES doing the experiments in this book! He does have to do them with a parent but I would recommend that for any experiment!
