Study Guide For Pharmacology: A Nursing Process Approach, 7e

Synopsis

This student study guide contains a variety of exercises specifically designed to reinforce content presented in the textbook. Chapter worksheets feature more than 1,800 study questions, 160 drug calculation and dosage problems, and case-based critical thinking exercises. Like the Kee text, the study guide features a strong nursing focus and comprehensive coverage of drug dosage calculations, including numerous sample drug labels. Over 1,800 study questions reinforce textbook concepts and prepare you for the NCLEX® examination. An extensive section of drug calculation problems helps you master important dosage calculation methods. Case-based critical thinking exercises enhance your understanding of nursing responsibilities in drug therapy. Sample drug labels familiarize you with the labels you will encounter in clinical practice. A basic math review appendix provides a helpful review of key mathematics concepts. Answers for all exercises are included to facilitate self-study. Thoroughly updated content corresponds to the Kee text, including a new chapter on medication safety. Additional NCLEX® examination-style review questions reflect an increased focus on alternate item-format questions. Approximately 100 new prioritization activities provide practice in identifying key nursing actions.

Book Information

Paperback: 336 pages

Customer Reviews

I'm currently using this for my lpn course and some of my classmates have the first version and there are a few errors in the chapters. The answers in the back of the book is a plus but no explanation. You have to figure that part out for yourself on how to do the math problems in chapter

5 and no rationale on why this answer was chosen.

This book is good for nothing. It doesn't help you understand the text it doesn't help you remember. This book doesn't make pharmacology easier nor does it help you understand the textbook. It contains word jigsaws and crossword puzzles and fill in the blank. Our teacher helped write the textbook and study guide and said there are errors in the answers to some of the questions that have not been fixed. Save your money and invest in a different study guide.

NO. Waste of money. There are many free sources online if you don't understand the textbook. You really only need to know a few things for Pharm. 1) IV calculations 2) KHD_DCM/MCG and Liters Meters Grams between the "_"

So glad I purchased these paid half the price of the 8 edition. It contains the same information, although some chapters are not listed in the same order as the newer version

A lot of questions from this book ended up on my pharm nursing test. Great 4 practice.

I am in nursing school, and the book helped me pass advanced pharmacology!! I made flashcards for the questions for each chapter. It helps you understand what is important from each chapter. I received a high B in the class, and several of my classmates did not pass it. I highly recommend you use this book. In my opinion it is a must have!!

It's bring new, very helpful and they are in good shape just like describe in the picture. Shipment was faster than I was expecting. I ordered on Friday night and got some of my books on a SUNDAY. Are you kidding? what company deliver merchandises on a Sunday? Absolutely RECOMMENDING IT

Excellent book
