Customer Reviews

A paramedic partner of mine recommended this series of books to me (he had the pathophysiology one), and after seeing his I immediately bought them all. I'm an EMT and don't actually have to know anything in this book, but I plan on medical school, so I read everything that'll give me a head start. The information in this book is presented with such incredible simplicity it puts every other textbook I've ever come across to shame. Providing visuals helps a lot, especially since some of them are utterly ridiculous and hilarious at 4AM on an ambulance. I learned more from this book than a lot of paramedics know about cardiology. I strongly recommend this one and all the others in the series to anyone at any level of healthcare.

Book is easy enough to follow - not as in depth as I would like it to have been and the "visual-ness" of it isn't too great either - sometimes there are just silly cartoons on the pages that don't have too much to do with the actual content. I bought this book as I'm starting out on a cardiac floor (RN) and for me it's just a basic overview with just OK visual aids.

If you are a visual learner I highly recommend getting this book!!! Although it didn't contain everything I needed for my Cardiac section in Nursing school it was a great tool for me to visual images during testing.

Love these nursing books. Great pictures and easily explained concepts that are hard to understand normally from textbooks. As a new nurse these books are great tools for learning. Book came quickly and was in superb condition.

I have about books 10 from this series. I bought this one just to brush up on general cardiology knowledge when moving from the ICU to the Cardiac Cath Lab and it was quite helpful. I wouldn't have gotten through school without them. They are great for getting a solid overall view of a subject. Great for students.

More than met my expectations. I love this series!

Excellent for basic knowledge, clear and quick 'go-to' information. I am a visual learner and this is

great for that. The kindle version rocks!

Helped me get an A in my cardiac test in the last semester in nursing school. Besides cardiovascular system is my favorite subject.
