The writing and organization of the newest edition has improved, but it also introduced numerous errors. For example, in the post-resuscitation chapter, a formula given for the 5% systolic blood pressure for age was $(\text{age}/4) + 4$, which I believe is the formula for calculating the correct uncuffed ET tube size in mm. The formula for the systolic blood pressure calculation should be $(\text{age} \times 2) +$

70. The alternate formula for calculating maintenance IV fluid rate in the same chapter is also incorrect. It states for children weighing more than 20 kg, the maintenance rate is $40 + \text{weight in kg}$, but I think it should be $60 + \text{weight in kg}$.

Awesome! Came exactly as described in full plastic wrap and undamaged. This is the exact American Heart Association PALS manual needed for the class. The best part is I ordered this on January 9th and the shipping estimate date was January 17th but I actually got the book on January 10th. That's fast!! Now if you're trying to teach yourself PALS then this book is not the most user friendly but it contains the information needed and is required for the class and certification. I did better organizing the information myself.

It's a PALS book, not much to say about it as it's required by AHA for the class. I did think the book was poorly organized compared to the ACLS book, but it tells you what you need to know.

Helpful for the PALS certification. The removable insert with the algorithms is a life saver

Great reference book!

great book, perfect condition

A cheap alternative to the newer version. If you can get a copy of the current algorithms you will do fine with this old copy.

It was the 2010 edition instead of the 2015 edition but it still had all the information I needed for the course. The instructions didn't care which edition I had.
